## **AMENDMENTS TO THE CLAIMS**

The following listing of claims will replace all prior versions and listings of claims in this application.

## **LISTING OF CLAIMS:**

- 1. (Currently Amended) Sliding bearing comprising two opposite bearing surfaces (3, 4) which enclose a gap (6) containing a lubricant film (5), said bearing surfaces (3, 4) being moveable with respect to each other in a generally parallel fashion, at least one (4) of said surfaces being provided with at least one cavity (10), said cavity having a depth which is at least equal to the lubricant film thickness, characterised in that wherein at least one of the length and width dimension of the surface area of said cavity amounting to at least 100 μm.
- 2. (Original) Bearing according to claim 1, wherein at least one of the length and width dimensions amounts to at least 1000 µm.
- 3. (Currently Amended) Bearing according to claim 1 or 2, wherein at least one of the length and width dimensions amounts to at least 5000 µm (fig. 5, 6).
- 4. (Currently Amended) Bearing according to any of the preceding claims claim 1, wherein the cavity depth is at least equal to 10 times the lubricant film thickness.
- 5. (Currently Amended) Bearing according to any of the preceding claims claim 1, wherein the cavity depth is at least equal to 20 times the lubricant film thickness.
- 6. (Currently Amended) Bearing according to any of the preceding claims claim 1, wherein the cavity depth is maximally 50 times the lubricant film thickness.

Attorney's Docket No. <u>1019219-000029</u> Application No. <u>Unassigned</u>

Page 4

(Currently Amended) Bearing according to any of the preceding claims claim 1,

wherein the sum of the surface areas of all cavities of one and the same bearing surface

amounts to at least 15% of the contact area of the bearing surfaces.

8. (Currently Amended) Bearing according to any of the preceding claims claim 1,

wherein the sum of the surface areas of all cavities (10) of one (4) and the same bearing

surface amounts to at most 50% of the contact area of the bearing surfaces (3, 4).

9. (Currently Amended) Bearing according to any of the preceding claims claim 1,

wherein at least one of the surfaces (3, 4) has at least 4 cavities.

10. (Currently Amended) Bearing according to any of the preceding claims claim 1,

wherein at least one of the surfaces (3, 4) has at most 8 cavities.

11. (Currently Amended) Bearing according to any of the preceding claims claim 1,

wherein the gap (6) between the bearing surfaces (3, 4) as seen in the direction of relative

movement has an inlet (7) and an outlet (8) for the lubricant film, whereby a bearing length is

defined between said inlet (7) and outlet (8) and said inlet (7) and outlet (8) being at a

distance from any of the cavities (10).

12. (Currently Amended) Bearing according to claim 11, wherein the center of a

cavity (6) or of a group of cavities is located at a distance of 0.6 to 0.8 times the bearing

length from the inlet (7).

13. (Currently Amended) Bearing according to claim 11, wherein one and only one

cavity (6) is provided, said cavity being positions approximately at equal distances from the

inlet (7) and the outlet (8).

Application No. Unassigned

Page 5

14. (Currently Amended) Bearing according to claim 11 or 12, wherein at least two

cavities (6) are provided, the distance between the formost cavity (10) and the inlet (7) being

larger than the distance between the rearmost cavity (10) and the outlet (8).

15. (Currently Amended) Bearing according to any of the preceding claims claim 1,

wherein a plurality of cavities is provided, said cavities (10) are isolated from each other.

16. (Currently Amended) Bearing according to any of the preceding claims claim 1,

wherein the lubricant film thickness under running conditions is in the range of 0,01  $\mu m$  to 10

μm.

17. (New) Bearing according to claim 2, wherein at least one of the length and width

dimensions amounts to at least 5000 µm.

18. (New) Bearing according to claim 12, wherein at least two cavities are provided,

the distance between the formost cavity and the inlet being larger than the distance between

the rearmost cavity and the outlet.
